

Legacy System Modernization

SYNERGY
Automated Modernization
and
Public Sector Expertise

Leaders in Public Sector Systems
and Automated Modernization have partnered to deliver

Legacy-SMARTT **System Modernization Approach with the Right Team and Tools**

Legacy System Challenges

- Expensive-to-support hardware and software
- Shrinking labor pool that understands older systems
- Unused programs and errors in financial data
- Difficult / risky to maintain
- Expanding gap between system functionality and business needs
- Desire to preserve prior investment in useable state specific business logic
- Difficult-to-learn menu or code based navigation
- Outdated or incomplete documentation
- Cumbersome to bolt on newer technology

A New Approach

Traditional system upgrade options—whether starting from scratch, system transfers, incremental changes, or bolt-on upgrades—each have inherently problematic challenges. The Legacy-SMARTT solution offers a new approach. We provide the right tools and team for complete, rapid and cost effective modernization of legacy systems.

Legacy-SMARTT offers:

- Automated tools for application documentation and conversion
- Automated tools for database conversion
- Automated tool for auditing and correcting financial data
- Software framework and tools for adding functionality and GUI
- A team with public sector program expertise and proven on-time / on-budget project experience

Organizations no longer need to completely replace legacy systems to address technical limitations.

Disruption to existing operations can be minimized and diversion of staff resources from current responsibilities can be reduced.

Prior investment in state-specific business logic can be preserved.

Results can be achieved in less time with lower costs/risks than alternative approaches.

The Right Team and Tools

Modernization Projects

Recent State Projects

- State of California – Department of Social Services
- State of California – EDD
- State of California - Department of Industrial Relations
- State of California - OSHA Appeals Board
- State of California - Caltrans
- State of California - Department of Insurance

Other Organizations

- State of New Jersey
- Harpo Studios
- US Navy
- WorldSpan
- USDA
- DOD/SAIC
- Arizona Public Service
- McKesson
- Northrop Grumman
- FedEx
- University of Puget Sound
- City of Baton Rouge
- Detroit Edison

WHY AUCTOR

Effective technology—and effectively used technology—is essential for public sector agencies facing the challenges of “doing more with less.” Auctor is committed to bringing our clients innovative technology solutions and services to facilitate, simplify, and streamline their work.

For 20 years we have partnered with government agencies to provide technology solutions for their complex and constantly changing business needs. We provide software and operations outsourcing, as well as transition change management and performance-improving consulting and training services.

One area of focus is serving the needs of organizations administering the Child Support Enforcement Program (Title IV-D). Our ultimate clients are their clients—children and families who are very dependent on the establishment and enforcement of child support orders for their physical, financial, and emotional well-being.

We currently provide support to four child support agencies, including complete outsourcing of the information systems function on two statewide contracts.

WHY UNIFY

Unify is a successful information management company with a rich heritage in Automated Legacy Modernizations. We have converted or modernized more than 150 applications, led by our team of experts. We offer best of breed solutions and partner with leading companies in order to deliver end-to-end 100% automated conversion solutions. Unlike other companies who may have partial automation and a limited approach, Unify’s strategy is to deliver total solutions that meet all of our clients’ modernization challenges.

With our tools and team, we are able to convert legacy systems to newer platforms in a fraction of the time with little to no risk and with a substantial reduction of cost. We also offer a firm fixed price contract, so you know your exact cost and can budget accordingly.

Our Automated Modernization solution is a safe, proven methodology designed to reduce the time, risk and cost associated with modernizing legacy systems. Through the use of automated tools, conversion is achieved without manually re-writing the application. Such an approach provides a modern platform for adding any required capabilities to share or make data available to other systems, for adding new functionality, and for implementing a Graphical User Interface.

Our Automated Modernization will convert old code, including COBOL, Lotus Notes, Oracle Forms, or Adabas/Natural, to a new platform, ready for testing and production. The result is a project completed with minimal risk in a fraction of the time of other approaches and at a reduced cost.
